AI-Powered Anomaly, Fraud & Inefficiency Detection for the MPLAD Scheme

An AI system that tracks MPLAD funds and flags problems early.

Problem Statement Category: Governance & Public Policy
Team Name: **TEAM X**
Team Leader: **RAYIPATI GIRIDHAR**
Team Member: **NISHANTH.S**

THE PROBLEM

MPLAD Funds Are Hard to Trust, Track & Trace

Fragmented Records

Data is scattered across districts and agencies.

Manual, Reactive Audits

Problems are found only after the money is spent.

Stalled & Ghost Works

Many recommended works never actually get built.

OBJECTIVE

What We Set Out to Build

One AI system that watches every stage of MPLAD spending — and flags trouble early.

Detect Fund Anomalies

Spot mismatches between allocation and sanction.

Surface Fraud Signals

Catch inflated costs and duplicate works.

Expose Inefficiency

Find delays and stalled projects.

Enable Real-Time Oversight

One live dashboard for every officer.

DATA FOUNDATION

Every Rupee, Tracked Across Six Stages

These six numbers feed the AI model, for every MP and constituency.

Allocated Fund Limit

Per-MP annual/term ceiling

Works Recommended

Proposed by the MP

Works Sanctioned

Approved by district authority

Works Completed

Physically executed & closed

Expenditure (Completed + Ongoing)

Actual utilisation booked

HOW IT THINKS

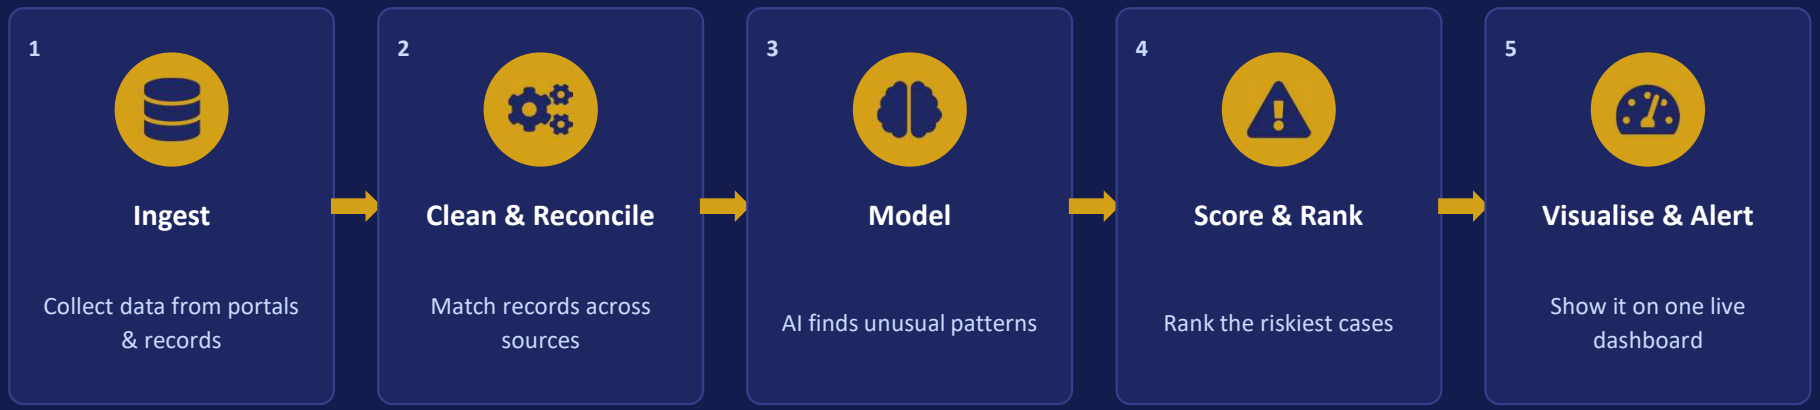

Turning Numbers Into Questions

The AI combines the six fields to ask simple questions about every constituency.

Signal	Question It Answers
Utilisation Ratio	Is the money being spent as planned?
Sanction Breach	Was more approved than the MP is allowed?
Execution Drop-off	How many recommended works actually happen?
Completion Lag	Which constituencies have stalled works?
Cost-per-Work Outlier	Is any single work priced too high?

SYSTEM DESIGN

End-to-End Architecture

Officers confirm or reject each flag — the model keeps learning every month.

DETECTION METHODOLOGY

Rules + Machine Learning, Working Together

Simple Rules Catch the Obvious

- Sanctioned amount is more than the allowed limit
- A work stays incomplete for years
- Duplicate or copy-paste work descriptions
- Money spent with no approval on record

AI Catches the Hidden Patterns

Finds Outliers Automatically

Learns what 'normal' spending looks like, and flags what isn't.

Spots Sudden Changes

Notices when a constituency's spending pattern shifts.

Reads Work Descriptions

Catches duplicate or copy-paste work entries.

Explains Every Flag

Tells the officer exactly why a case was flagged.

DASHBOARD PREVIEW

One Screen, Every Constituency

Illustrative sample view — figures are representative, not actual MPLADS data.

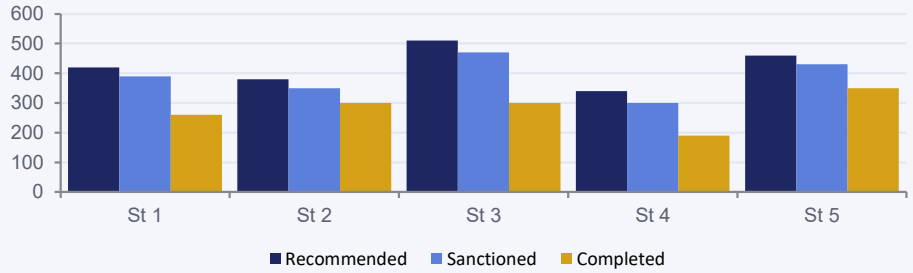

₹5 Cr
Annual Allocation / MP

18%
Flagged for Review

₹412 Cr
Anomalous Spend Detected*

76%
Avg. Completion Rate

Sample: Works Pipeline Drop-off (5 States, Illustrative)

Sample: Top Risk Flags Queue

Constituency	Signal	Risk
Constituency A	Calamity overrun 34%	High
Constituency B	Sanction > limit	High
Constituency C	Duplicate work desc.	Medium
Constituency D	Completion lag 3.1 yrs	Medium
Constituency E	Cost-per-work outlier	Low

**Sample numbers for demo — real figures come from live MPLADS/PFMS data.*

Zoom from state → district → constituency → individual work in one click.

Thank You

Let's make every MPLAD rupee accountable, traceable and timely.
